CAREER OBJECTIVE

Full Stack Development intern candidate with hands-on experience building web applications in JavaScript, React, and Node.js, including a live college admission portal delivered during an internship. Combines a working foundation in Python, Java, and C with a portfolio of self-directed AI and developer-tooling projects. Seeking a Full Stack / Web Development Intern role to contribute production-quality code while continuing to build depth in data structures, algorithms, and backend systems.

EDUCATION

B.Tech in Artificial Intelligence & Data Science

Muthayammal Engineering College

Expected Graduation: 2028

CGPA: 7.80 / 10

INTERNSHIP EXPERIENCE

Web Development Intern — Aalan Techsoft

Duration: 15 Days

Final Product: College Admission Portal

- Contributed to a full-stack college admission portal from planning through delivery during an intensive 15-day internship, working directly with the development team.
- Built and integrated core modules — student registration, application form submission, and application status tracking — using JavaScript, React, Node.js, and REST APIs to connect frontend and backend.
- Tested and debugged features across the stack, working with JSON-based data exchange to ensure a smooth, reliable end-to-end admission workflow for the final delivered product.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, C, HTML5, CSS3

Web & Frameworks: React, Node.js, REST APIs, JSON

Tools & Platforms: Git/GitHub, npm, Visual Studio Code, N8N

Coding Practice: Data Structures & Algorithms (DSA), LeetCode, CodeChef

PROJECTS

AI Resume Analyzer / Resume Ranker

- Built a web application that parses resumes and job descriptions, extracts key skills, and scores candidate–role fit using NLP-based analysis.
- Designed a ranking pipeline to help streamline candidate shortlisting based on skill-match relevance.

Multi-Language Code Workflow Visualizer

- Built an educational debugging tool that executes Java and Python code and visualizes step-by-step program flow, variable state changes, and execution paths.
- Designed the visualization layer to help learners trace program logic interactively rather than through static output.

Online Compiler

- Created a browser-based, multi-language code editor that compiles and runs code with real-time output.

Online Chatbot

- Designed an interactive chatbot combining rule-based logic and AI/NLP techniques to process user queries and generate conversational responses.

Expense Tracker

- Built a personal finance web app to record, categorize, and visualize daily expenses and spending trends.

Todo List Application

- Built a task management web app supporting task creation, updates, organization, and status filtering with persistent storage.
